Your Complete Facility Maintenance Solution

Chiller/Heat Absorber Refurbishing

Maple Grove Enterprises uses coatings that provide superior resistance to corrosion, abrasion and erosion and high-quality metal repair products when rebuilding your chillers and heat exchangers.

Our long-lasting and cost-effective repairs will improve fluid or air flow rates, leading to greater efficiency and performance. This will reduce your energy costs and extend the life of your equipment, with a dramatic impact on your bottom line.

Corroded and damaged heat absorber.

Before sandblasting or coating, we cork all the holes to prevent coatings and debris from entering the tubes.

We coat the heat absorber with corrosion-resistant coating to extend the life of your expensive equipment.
