Your Complete Facility Maintenance Solution

Fluid Enhancement/Pump Rebuilding

Maple Grove Enterprises specializes in the application of fluid flow-enhancing products. These products are typically applied to pump casings, impellers, pipe lines, tube sheets, and more.

Our application of state-of-the-art polymeric coatings is designed to reduce your energy costs by improving the efficiency of the equipment. The coatings provide an excellent low-friction surface that improves flow rates and extends the service life of each component.

Split casing pump housing is corroded and inefficient.

The housing is sandblasted and painted with polymeric coating.

Coated housing improves the efficiency of the pump.
