*Your Complete Facility Maintenance Solution*

## Industrial Truck Body Work

Northern winters can wreak havoc on your equipment. While road salt is a champion at keeping ice off the roads, it also eats away at your vehicles. Maple Grove Enterprises is here to help! Unlike other body repair shops, we use an advanced 3-coat system to protect your equipment and vehicles from damage by road salt, extreme weather, and other corrosion-causing agents.

### Fabrication

Since rust can form holes in the body and frame, our services include fabrication of parts for complete body repair. Our full-service metal fabrication shop is equipped with industrial-sized metal brakes and shears, plasma cutters, lift equipment, tubing benders, and MIG and TIG welders.

*Fabricating parts for an electric boom truck.*

### Sandblasting & Coating

Maple Grove Enterprises provides both sandblasting and coating services in our Arcade facility. We remove rust and corrosion using our state-of-the-art sandblasting equipment and superior blast media.

We paint your equipment using our advanced 3-coat system, consisting of zinc, epoxy and urethane. These coatings provide superior resistance to road salt, extreme weather, UV light, and other corrosion-causing agents.

*From fabricating to final coating, Maple Grove Enterprises gets the job done right and on time!*
